Darcy (Lianrui) Sun

AI PRODUCT MANAGER | TECHNICAL PRODUCT BUILDER

lianruisun1020@gmail.com | 781-547-9615 | linkedin.com/in/darcysun/ | lianruisun.com

EDUCATION

New York University | Courant Institute of Mathematical Sciences | M.S. Computer Science — **Expected May 2027**

Worcester Polytechnic Institute | B.S. Computer Science | GPA 3.75/4.00 — **Aug 2021 - May 2025**

EXPERIENCE

Baidu AI Cloud | Intelligent Marketing — May 2026 - Present

AI Product Manager Intern, Hogee | Beijing, China

- **Led product planning and delivery for Hogee's media-listening SaaS module,** part of Baidu AI Cloud's multi-agent digital-employee platform; supported 4 enterprise POCs with tailored solutions while advancing roadmap-based product iterations for a module gathering and processing ~50K content items daily.
- Translated customer and product needs into **PRDs** and functional **React prototypes** with mock data for requirements and interaction alignment, then coordinated UX/UI, front-end, back-end, ML, and QA from review through testing and release.
- **Redesigned and launched the module's core product architecture** by separating reusable data collection from task-specific analysis, allowing the same media data to support brand, product, campaign, and competitor use cases without duplicate ingestion or inconsistent metrics.
- **Delivered advanced query and keyword-validation capabilities**, supporting Boolean and proximity expressions while blocking overly broad or meaningless terms to improve retrieval relevance and prevent costly, low-quality data collection.
- **Expanded monitoring coverage to 60+ sources** across social platforms, news outlets, official media, and industry verticals; redesigned source selection and standardized field handling, filtering, and visualizations across heterogeneous data.
- **Introduced pre-collection previews that estimate historical and daily content volume** and display recent matching posts, helping users validate query relevance, adjust collection limits, and catch overbroad or insufficient coverage.
- **Improved anomaly-detection and clustering quality** by tracing false-positive alerts and incorrectly merged events to upstream sentiment errors and long-form text noise, then delivering second-pass sentiment validation and focused text extraction before clustering.
- **Designed and launched event-propagation and key-account analysis**, combining rule-based identification of high-impact negative posts with propagation timelines, account-level aggregation, and grounded AI summaries to reveal how issues spread and which accounts required priority attention.
- **Designed and launched an AI-assisted reporting system** for scheduled monitoring and event recaps, structuring platform metrics, charts, and source evidence as inputs to LLM-generated summaries, propagation analysis, and recommendations; supported recurring and one-time generation, configurable delivery, report history, and failure recovery.
- **Designed a media-monitoring Agent spanning 8 business workflows and 41 API-backed tools**, defining intent mapping, business-object resolution, permission checks, risk-tiered confirmation, readback validation, failure handling, and audit logging.

Shangping | AI-Powered Restaurant Review SaaS — May 2025 - Aug 2025

Founder & Full-Stack Engineer | Beijing, China

- **Built and launched an AI-powered restaurant review SaaS** that converts structured dish, tag, and rating selections into editable copy for TikTok, RedNote, Dianping, Meituan, piloted across 3 restaurants.
- Interviewed ~15 diners and 2 restaurant owners, identifying low motivation and writing effort as the main barriers to review submission; **designed the product workflow and interface** around structured dish, tag, and rating inputs, with restaurant-reported counts indicating ~2.8× the pre-pilot review volume.
- **Designed DeepSeek-V3 prompt and context workflows**, curating 70 restaurant reviews as few-shot examples and combining restaurant metadata, dish attributes, and user selections to generate grounded.
- **Built the product end to end with React, TypeScript, AWS Lambda, and S3**; added HMAC verification and CloudWatch logging, while JSON-based tenant configuration reduced new-restaurant setup to 5 minutes.

InnoSpire Technology Limited | WPI Major Qualifying Project — Aug 2024 - May 2025

Project Lead & Full-Stack Application Developer | Worcester, MA

- **Led a 3-person team to deliver a multilingual Android accessibility app** and source code for blind and visually impaired users in partnership with InnoSpire Technology. The project received WPI's Data Science Department Outstanding Project Award.
- **Designed and delivered an offline AI solution** combining **YOLOv5**-based perception with **Phi-3 Mini, a local small language model deployed via llama.cpp**, complementing **GPT-4o**-based online scene understanding and preserving core functionality without network access.

SKILLS

AI Product | LLM/VLM applications, Agent/LUI workflows, tool calling, MCP, RAG, prompt/context/few-shot design, model evaluation
Product | Customer discovery, PRDs, user flows, interactive prototypes, POC delivery, cross-functional execution, Figma, Postman
Engineering & Cloud | JavaScript, TypeScript, Python, SQL, React, Node.js, HTML, AWS Lambda, DynamoDB, S3, Docker, Git
